

I would like to express my earnest beliefs that by allowing Licensed Exempt operators the ability to use this spectrum the FCC will be creating the single largest opportunity for rural communities to get broadband to date.

As the FCC is charged with managing the airwaves in such a way as to maximize the benefit to the American public I can honestly say I believe this is by far the single best usage this spectrum can be put to.

I would further like to add that the regulations governing this spectrum not require any special restrictions that will make it difficult for the manufacturers to quickly get this equipment into our hands.

Thank you.
